

English, 2006 EC, entrance exam

Grade 12 · English · 2006 E.C.

Time allowed: 120 minutes

Questions: 106

Total marks: 106

Name _____ Grade _____ ID No. _____ Date _____

1. Us him and go up and pick (1)
 A. Let him go and pick up us. B. Let him up and go pick us.
 C. Let him go up and us pick. D. Let us go and pick him up
-
2. Carefully work you did your check? (1)
 A. Did you work your check carefully? B. Did carefully you check your work?
 C. Did you carefully check your work? D. Your work did you carefully check?
-
3. People going to many invite party are to your you? (1)
 A. Are you going to invite many people to your party?
 B. Are your many people going to invite you to party?
 C. Are your many party going to you people to invite?
 D. Are you going to many party to invite your people?
-
4. Many got you how sisters have (1)
 A. How many got sisters you have? B. How many you have sisters got?
 C. How many sisters have you got? D. How many have you got sisters?
-
5. For and join come us celebration the? (1)
 A. Come and join for us the celebration. B. For us the celebration come and join.
 C. Come and join the celebration for us. D. Come and join us for the celebration.
-
6. a. This is the planet Venus. b. Venus is our nearest neighbour. c. However, no plants or animals could exist on Venus. d. There is no oxygen in the air and the planet is without water. e. in the evening just after sunset we see a bright object in the west. (1)
 A. d e c a b B. a e b c d
 C. b c a d e D. e a b c d
-
7. a. Dallol is found in the Afar Region of Ethiopia. b. it is one of the lowest and hottest areas of the world. c. Temperatures can reach as high as 145°C in the sun. d. This makes the place very difficult for wild life to live and vegetation to grow e. There is no rain for most of the year, and the highest annual rainfall is only 200mm (1)
 A. c e a d B. b a b c e d
 C. e c a b d D. c a b e d
-
8. a. Informative speech is meant to convey knowledge. b. she/he should also organize her/ his speech coherently. c. Its application in other spheres of life is also common. d. This type of speech is mostly practiced in the academia. e. The user of such speech should prepare her/himself very well. (1)
 A. A d c e b B. a c d e b
 C. a c e b d D. a e d b c

-
9. a. Every year one million children die of malaria b. Malaria is very common in many parts of the world c. However, (1) people must also cooperate to stop its spread. d. Governments have special programmes to control malaria. e. Many others cannot go to school or work because to malaria.

A. A b c e d

B. b a e d c

C. b d a e c

D. a e b c d

10. 1.If you suffer from shyness, you are not alone, for shyness is a universal phenomenon. According to recent research,"close to 50 percent of the general population report that they currently experience some degree of shyness in their lives. In addition, close to 80 percent to people report having felt shy, at some point in their lives". As shyness is so prevalent in the world, it is not surprising that social scientists are learning more about the cause. They have found that shyness in an individual can result from both biological and environmental factors. 2. Recent research reveals that some individuals are genetically pre disposed to shyness. In other words, some people are born shy. Researchers show signs of shyness: they are quieter and more vigilant. Researchers have identified psychological differences between sociable and shy babies that show up as early as two months. In one study, two-month-olds who were later identified as shy children reacted with signs of stress to stimuli such as moving mobiles and tape recordings of human voices: increased heart rates, jerky movements of arms and legs, and excessive crying. Further evidence of the genetic basis of shyness is the fact that parents and grandparents of non-shy children more often say they were shy as children than parents and grandparents of shy children. 3. However, environment can, at least in some cases, triumph over biology. A shy child may lose much of his or her shyness. On the other hand, many people who were not shy as children become shy as adults, a fact that points to environmental or experiential causes. 4. The environmental cause of shyness may be a child's home and family life. Children who grew up with a difficult relationship with parents or a dominating older sibling are likely to be inhibited in social interactions. Another factor is the fact that today's children are growing up in smaller and fewer relatives living nearby. Growing up in single-parents homes or homes in which both parents work full time , children may not have the socializing experience of frequent visits by neighbours and friends. Because of their lack of social skills, they begin to feel socially inhibited, or shy, when they start school. 5. A second environmental cause of shyness in an individual may be one's culture . In a large study conducted in several nations, 40 percent of participants in the United states rated themselves as shy, compared to 57 percent in Japan and 55 percent in Taiwan. Of the countries participating in the study, the lowest percentage of shyness was found in Israel, where the rate was 31 percent. 6. Researchers Henderson and Zimbardo say, "One explanation of the cultural difference between Japanese and Israelis lies in the way each culture deals with attributing credit for success and blame for failure. In Japan, an individual's performance success is credited externally to parents, grandparents, teachers, and others, while failure is entirely blamed on the person. 'Therefore, Japanese learn not to take risks in public and rely instead on group-shared decisions. "In Israel, the situation is entirely reversed," according to Henderson and Zimbardo. "Failure is extremely attributed parents,teachers, coachs, freinds, and Anti semitism, and other sources while all performance success is credited to the individual's enterprise." The consequence is that is realis are free to take since there is nothing to lose by trying. 7. In addition to family and culture, technology may play a role as well. In the United states, the number of young people who report being shy has risen from 40 percent to 50 percent in recent years. The rising numbers of shy young people may be," due in part to the growing dependence on non-human forms of communication, coming about as a result of our huge advance in technology. Watching television, playing video games, and surfing the Web have displaced recreational activities that involve social interaction for many young people. Adults, too, are becoming more isolated as a result of technology. Face-to-face interactions with bank tellers,gas station attendants, and store clerks are no longer necessary because people can use machines to do their banking , fill their gas tanks, and order merchandise. College students take online telecourses. Telecommuters work at home, giving up daily contact with coworkers. Everyone texts, e-mails, and converses anonymously in online chat rooms. As a result, people have less opportunity to socialize in person. Eventually , they increasingly become awkward at it and start avoiding it altogether. Source: writing A Lademic English, 2006] in short, they become shy.

(1)

Which of the following sentences is true according to the passage?

- A. Because of lack of socializing experience, many children grow up in single-parent homes.
- B. Children who get frequent visits from friends or neighbours are less likely to feel socially inhibited
- C. Children who grow up in homes in which both parents work full time have no relatives living nearby
- D. Children who grow up in homes in which both parents work full time have a difficult relationship with parents.

11. 1.If you suffer from shyness, you are not alone, for shyness is a universal phenomenon. According to recent research,"close to 50 percent of the general population report that they currently experience some degree of shyness in their lives. In addition, close to 80 percent to people report having felt shy, at some point in their lives". As shyness is so prevalent in the world, it is not surprising that social scientists are learning more about the cause. They have found that shyness in an individual can result from both biological and environmental factors. 2. Recent research reveals that some individuals are genetically pre disposed to shyness. In other words, some people are born shy. Researchers show signs of shyness: they are quieter and more vigilant. Researchers have identified psychological differences between sociable and shy babies that show up as early as two months. In one study, two-month-olds who were later identified as shy children reacted with signs of stress to stimuli such as moving mobiles and tape recordings of human voices: increased heart rates, jerky movements of arms and legs, and excessive crying. Further evidence of the genetic basis of shyness is the fact that parents and grandparents of non-shy children more often say they were shy as children than parents and grandparents of shy children. 3. However, environment can, at least in some cases, triumph over biology. A shy child may lose much of his or her shyness. On the other hand, many people who were not shy as children become shy as adults, a fact that points to environmental or experiential causes. 4. The environmental cause of shyness may be a child's home and family life. Children who grew up with a difficult relationship with parents or a dominating older sibling are likely to be inhibited in social interactions. Another factor is the fact that today's children are growing up in smaller and fewer relatives living nearby. Growing up in single-parents homes or homes in which both parents work full time , children may not have the socializing experience of frequent visits by neighbours and friends. Because of their lack of social skills, they begin to feel socially inhibited, or shy, when they start school. 5. A second environmental cause of shyness in an individual may be one's culture . In a large study conducted in several nations, 40 percent of participants in the United states rated themselves as shy, compared to 57 percent in Japan and 55 percent in Taiwan. Of the countries participating in the study, the lowest percentage of shyness was found in Israel, where the rate was 31 percent. 6. In paragraph 3, the purpose of the author in using the statement " Many people who were not shy as children become shy as adults." is perhaps to show the:

- A. genetic basis of shyness:
- B. impact of environment over human behaviour.
- C. Relationship between genetics and environment.
- D. Role of genetics in determining human behaviour.

16. 1.If you suffer from shyness, you are not alone, for shyness is a universal phenomenon. According to recent research,"close to 50 percent of the general population report that they currently experience some degree of shyness in their lives. In addition, close to 80 percent to people report having felt shy, at some point in their lives". As shyness is so prevalent in the world, it is not surprising that social scientists are learning more about the cause. They have found that shyness in an individual can result from both biological and environmental factors. 2. Recent research reveals that some individuals are genetically pre disposed to shyness. In other words, some people are born shy. Researchers show signs of shyness: they are quieter and more vigilant. Researchers have identified psychological differences between sociable and shy babies that show up as early as two months. In one study, two-month-olds who were later identified as shy children reacted with signs of stress to stimuli such as moving mobiles and tape recordings of human voices: increased heart rates, jerky movements of arms and legs, and excessive crying. Further evidence of the genetic basis of shyness is the fact that parents and grandparents of non-shy children more often say they were shy as children than parents and grandparents of shy children. 3. However, environment can, at least in some cases, triumph over biology. A shy child may lose much of his or her shyness. On the other hand, many people who were not shy as children become shy as adults, a fact that points to environmental or experiential causes. 4. The environmental cause of shyness may be a child's home and family life. Children who grew up with a difficult relationship with parents or a dominating older sibling are likely to be inhibited in social interactions. Another factor is the fact that today's children are growing up in smaller and fewer relatives living nearby. Growing up in single-parents homes or homes in which both parents work full time , children may not have the socializing experience of frequent visits by neighbours and friends. Because of their lack of social skills, they begin to feel socially inhibited, or shy, when they start school. 5. A second environmental cause of shyness in an individual may be one's culture . In a large study conducted in several nations, 40 percent of participants in the United states rated themselves as shy, compared to 57 percent in Japan and 55 percent in Taiwan. Of the countries participating in the study, the lowest percentage of shyness was found in Israel, where the rate was 31 percent. 6. Researchers Henderson and Zimbardo say, "One explanation of the cultural difference between Japanese and Israelis lies in the way each culture deals with attributing credit for success and blame for failure. In Japan, an individual's performance success is credited externally to parents, grandparents, teachers, and others, while failure is entirely blamed on the person. 'Therefore, Japanese learn not to take risks in public and rely instead on group-shared decisions. "In Israel, the situation is entirely reversed," according to Henderson and Zimbardo. "Failure is extremely attributed parents,teachers, coachs, freinds, and Anti semitism, and other sources while all performance success is credited to the individual's enterprise." The consequence is that is realis are free to take since there is nothing to lose by trying. 7. In addition to family and culture, technology may play a role as well. In the United states, the number of young people who report being shy has risen from 40 percent to 50 percent in recent years. The rising numbers of shy young people may be," due in part to the growing dependence on non-human forms of communication, coming about as a result of our huge advance in technology. Watching television, playing video games, and surfing the Web have displaced recreational activities that involve social interaction for many young people. Adults, too, are becoming more isolated as a result of technology. Face-to-face interactions with bank tellers,gas station attendants, and store clerks are no longer necessary because people can use machines to do their banking , fill their gas tanks, and order merchandise. College students take online telecourses. Telecommuters work at home, giving up daily contact with coworkers. Everyone texts, e-mails, and converses anonymously in online chat rooms. As a result, people have less opportunity to socialize in person. Eventually , they increasingly become awkward at it and start avoiding it altogether. Source: writing A Lademic English, 2006] in short, they become shy.

As implied in paragraph 4, which of the following is the benefit of frequent neighbors' or friends' visits to children?

- A. It helps children not to become shy.
- B. Its helps children to grow up quickly.
- C. It develops children's socializing skills.
- D. It develops a good relationship between children and their parents.

17. 1.If you suffer from shyness, you are not alone, for shyness is a universal phenomenon. According to recent research,"close to 50 percent of the general population report that they currently experience some degree of shyness in their lives. In addition, close to 80 percent to people report having felt shy, at some point in their lives". As shyness is so prevalent in the world, it is not surprising that social scientists are learning more about the cause. They have found that shyness in an individual can result from both biological and environmental factors. 2. Recent research reveals that some individuals are genetically pre disposed to shyness. In other words, some people are born shy. Researchers show signs of shyness: they are quieter and more vigilant. Researchers have identified psychological differences between sociable and shy babies that show up as early as two months. In one study, two-month-olds who were later identified as shy children reacted with signs of stress to stimuli such as moving mobiles and tape recordings of human voices: increased heart rates, jerky movements of arms and legs, and excessive crying. Further evidence of the genetic basis of shyness is the fact that parents and grandparents of non-shy children more often say they were shy as children than parents and grandparents of shy children. 3. However, environment can, at least in some cases, triumph over biology. A shy child may lose much of his or her shyness. On the other hand, many people who were not shy as children become shy as adults, a fact that points to environmental or experiential causes. 4. The environmental cause of shyness may be a child's home and family life. Children who grew up with a difficult relationship with parents or a dominating older sibling are likely to be inhibited in social interactions. Another factor is the fact that today's children are growing up in smaller and fewer relatives living nearby. Growing up in single-parents homes or homes in which both parents work full time , children may not have the socializing experience of frequent visits by neighbours and friends. Because of their lack of social skills, they begin to feel socially inhibited, or shy, when they start school. 5. A second environmental cause of shyness in an individual may be one's culture . In a large study conducted in several nations, 40 percent of participants in the United states rated themselves as shy, compared to 57 percent in Japan and 55 percent in Taiwan. Of the countries participating in the study, the lowest percentage of shyness was found in Israel, where the rate was 31 percent. 6. Researchers Henderson and Zimbardo say, "One explanation of the cultural difference between Japanese and Israelis lies in the way each culture deals with attributing credit for success and blame for failure. In Japan, an individual's performance success is credited externally to parents, grandparents, teachers, and others, while failure is entirely blamed on the person. 'Therefore, Japanese learn not to take risks in public and rely instead on group-shared decisions. "In Israel, the situation is entirely reversed," according to Henderson and Zimbardo. "Failure is extremely attributed parents,teachers, coachs, freinds, and Anti semitism, and other sources while all performance success is credited to the individual's enterprise." The consequence is that is realis are free to take since there is nothing to lose by trying. 7. In addition to family and culture, technology may play a role as well. In the United states, the number of young people who report being shy has risen from 40 percent to 50 percent in recent years.
